

LEADERS IN LASER SUPPLY

BARRETTSTEEL.COM | SALES@CROBERTSSTEEL.COM | 01709 789200

BARRETT STEEL TUBES

Barrett Steel Tubes has grown continuously to become one of the largest suppliers of processed steel tube products in the UK and Ireland.

As part of the Barrett Steel Group our extensive product range includes hollow section, nominal bore tube, stainless steels and ERW precision tube in squares, rectangles, rounds, ovals and more.

The laser processing area of our business was established in 1999 to produce laser cut parts from Tubes, Box Section and Open Sections. A means of production recognised to save our customers time by making the design and fabrication of complex tubular structures a simple task.

Who We Are

- Established suppliers to a number of leading OEMs.
- Experienced in serving a wide range of specialist sectors.
- Proud to work with our customers to deliver optimum solutions for a diverse range of technically challenging and time-critical projects.

SUPPLY CHAIN MANAGEMENT

Barrett Steel Tubes is proud to work alongside customers offering tailored solutions to reduce costs whilst strengthening your supply chain.

- Dedicated Contract Manager.
- Experienced in understanding the requirements of OEMS and their tier one suppliers.
- Greater CAD capacity to allow for increase in new parts programming.
- Stock can be held and kits of parts created increasing processing efficiency, ready for call off as well as supplied on a consignment basis.
- Offer a Just in Time service to assist with cash flow.
- In-house expertise ensures parts are created in the most efficient manner.

The Importance of Quality

- Production Part Approval Process (PPAP).
- Initial Sample Inspection Report (ISIR).
- Part Submission Warrant (PSW).

Our experienced Quality Team are trained to be able to produce ISIR, PPAP and PSW documentation on request. This gives you the confidence that your parts are manufactured to your requirements.

LASER CUTTING RANGE

Square Sections

From **12.7mm x 12.7mm**
To **400 x 400 x 16**

Circular Sections

From **12.7mm**
To **610mm**

Rectangular and Oval Sections

From **25.4mm x 12.7mm**
To **500mm x 300mm**

Channel Sections

From **52mm x 35mm**
To **430mm x 100mm**

Angle Sections

Equal
From **25mm x 25mm**
To **200mm x 200mm**

Unequal
From **40mm x 20mm**
To **250mm x 150mm**

Universal Beams

From **127 x 76 x 13**
To **457 x 191 x 98**

Universal Columns

From **152 x 152 x 23**
To **305 x 305 x 118**

Finished lengths up
to 15 metres, longer
lengths on application.

3D / 5 Axis Laser Cutting

3D / 5 Axis laser cutting can be utilised to create time saving weld preps and other geometrics. This will aid the fabrication of tubes, hollow sections, angles, channels and other shapes (on application, as well as other metals).

LT24 Tube Laser

The LT24 CNC Tube Laser is one of the UK's largest machines in terms of the sections and lengths that can be processed. The additional processing we offer saves our customers valuable fabrication time on the wide range of open sections, tubes and hollow sections produced by our approved suppliers.

Maximum thickness cut dependent on section size and machine - 25mm.

Stainless Steel, other non-ferrous metals, alternative sections/shapes can be quoted on application.

Maximum thickness cut in Stainless Steel same as above but limited to 10mm.

Aluminium and other non-ferrous on application.

OTHER PROCESSING OPTIONS

Tapping / Threading

We are able to offer a tapping service to laser and drilled parts ranging from M2 (2mm) to M12 (12mm). Greater sizes are available, please contact the team to discuss your requirements.

Saw / Mitre Cutting

Our cutting facilities include semi-automatic band saws and carbide saw cutting.

We can provide a bevelled, bundle, repitition, square and mitre cutting service which enables Barrett Steel Tubes to offer fast and accurate cutting for all your requirements.

Flowdrilling

Flowdrill also known as friction drilling, flow forming or thermal drilling process uses high rotational speed and high pressure to make holes in the desired material. Material is not lost using a Flowdrill process but forms a sleeve around the hole. The process is beneficial when there is a requirement for a thread in thin material without the use of thread inserts.

Bending

Two mandrel tube bending machines can bend material up to 38mm diameter in both Mild and Stainless Steel. Our machine (Elect 150) enables us to offer both fixed and variable radius bends on tubes up to 150mm dia. subject to tooling.

There are also four ring rollers on site that offer variable radius bending on sections up to 120mm x 120mm and the equivalent in rectangles and circles.

Alongside these machines a Euromac Digibend machine covers a variety of bending applications in both Hollow Sections and General Steel products.

Flowdrilling

Bending

HOLLOW SECTION CUTS

These cuts are examples of and not limited to our abilities, please contact the team with any other requirements.

Bird Mouth Circular

Bird Mouth Square

BARRETT STEELS LASER CUTTING PROCESSING CENTRE SERVES UK INDUSTRIES

At Barrett Steel Tubes, we proudly operate a state-of-the-art laser cutting processing centre that plays a vital role in serving various industries across the UK. With precision and innovation at its core, we offer high-quality laser cutting solutions that cater to the diverse needs of UK industries.

Sectors we support include:

Agriculture

Automotive

Transportation

Construction

Furniture

Energy and Sustainability

Sports

Yellow Goods

Leisure

Healthcare

Storage

Retail

GROUP SERVICES

Across our group network, we offer a comprehensive range of steel supply services. These include; Structural Steel Processing, Plate Profiling, Engineering Bar Stockholding and Processing. Additionally, we have a dedicated Balustrades and Walkways division for all your safety project requirements. Our commitment to excellence extends beyond stockholding to provide a complete suite of tailored solutions for our customers.
